As a sociologist, I have been interested in the study of work for many years. It is a field that has grown rapidly in recent years, and I am pleased to see that this book covers a wide range of topics, from the history of work to the latest research on work organization.

In the fourth edition of this successful and popular text, Tony Watson explains how the discipline of sociology perceives them to be. In doing so, it makes a significant contribution to the literature on defensive innovation and the role of networks in technological innovation and knowledge diffusion, as it provides a comprehensive overview of the sociological study of work, as well presenting a range of concepts, models and other theoretical ideas that students and researchers can apply to the study of work. The book examines industrial innovation and microeconomic network behaviour among producers and clusters, perceiving knowledge diffusion to be a socially-spatial, as much as a geographically distant phenomenon. The book sheds new light on settings where economic relations arise as emergent properties of social relations. This book contributes to the literature on defensive innovation and the role of networks in technological innovation and knowledge diffusion.
